

FORGEROCK TRAINING CONTENT : BASIC LEVEL

Course Title: Introduction to ForgeRock

Learn Skills you need to be a Successful Architecting, Building and deploying ForgeRock OpenIDM (Identity Management), OpenAM (Access Management).

Key Accomplishments

- Open-source identity platform
- Web Applications
- Application Programming Interfaces (APIs)
- Directory Services

Course Outline

- Module 1: Access Management – OpenAM
- Module 2: Directory Services – Open DJ
- Module 3: Identity Management – OpenIDM
- Module 4: Identity Gateway – OpenIG
- Module 5: Customization Use Cases

Prerequisites

- Basic knowledge and skills using the Linux operating system to complete labs
- Basic knowledge of JSON, JavaScript, REST, Java, Groovy, and XML will be helpful in understanding examples

For detailed content & fee contact us now, we will be happy to assist you.

FORGEROCK TRAINING CONTENT : INTERMEDIATE LEVEL

Course Title: ForgeRock Access Management – Customization and APIs

This hands-on technical introduction to ForgeRock Access Management focuses on APIs and customization use cases. Students examine Access Management extension points and gain the skills required to extend and integrate an Access Management deployment in a real-world context. Development best practices are demonstrated in a series of labs.

Course Outline

- Module 1: Extension Points
- Module 2: Implementing Service Provider Interfaces
- Module 3: Scripting API
- Module 4: Customizing Authentication
- Module 5: Scripted Authentication Modules
- Module 6: Customizing Authorization
- Module 7: Using the REST API
- Module 8: Authentication with the REST API
- Module 9: Common User Self-Service with the REST API
- Module 10: Authorization with the REST API
- Module 11: OAuth Custom Scopes
- Module 12: User Managed Access (UMA)

Prerequisites

- Basic knowledge and skills using the Linux operating system to complete labs
- Basic knowledge of JSON, JavaScript, REST, Java, Groovy, and XML will be helpful in understanding examples
