

# OKTA TRAINING

OKTA is an Identity and Access Management solution for cloud based networks. It is simple to configure than other technologies and hence it is much more popular. OKTA is not a tool because it doesn't need to be installed onto a system. It just requires a subscription to use it in the cloud. Also, to use more features, you just need to pay for it. It is commonly called an IDEAS (Identity as a service). Access management allows enterprises to protect their data. In this training you will get to know about the functionalities and features of OKTA. Also, you will learn to use OKTA for identity and access management purposes.

**Training Duration:** 23 hours

## Pre-Requisites:

- Basic knowledge of network administration,
- Unix, Linux Windows platforms and networking and cloud computing is preferred.

## Course Curriculum

1. INTRODUCTION TO SSO (SINGLE SIGN ON)
2. USING SAML 2.0
3. Why OKTA is different from others ?
4. Understanding admin roles and responsibilities.
